Subject Index

A

Airlines
  fleet assignment, advances in optimization of, 159–169
  schedule perturbation, ground delay program and, 298–311
  scheduling, temporary closure of airports and, 72–82
Algorithms
  heuristic, handicapped persons transportation problem and, 60–71
  multi-mode multi-user traffic equilibrium assignment, elastic demand in, fixed-point approach to, 107–128
  real-time traffic control at intersection, controlled optimization of phases, 5–17
  stochastic transportation user equilibrium assignment and, general transport networks, 349–362
  vehicle routing problem with backhauls, 372–385
Alternative specific constants, multinomial and nested logit models and, overspecification of, 363–371
Automated highway systems, vehicle/gap distribution, analytical models, 18–33

B

Backhauls
  time windows and, vehicle routing problem with, tabu search heuristic for, 49–59
  vehicle routing problem with, an exact algorithm for, 372–385
Bernoulli trials, independent, hazardous materials shipments as sequence of, objectives derived from, 252–261

C

Clustered rural postman problem, traveling salesman problem and, 187–192
Costs, nonadditive path, traffic equilibrium problem and, 337–348

D

Demand forecasting, discrete choice models and, overspecification of multinomial and nested logit models due to alternative specific constants and, 363–371
Desynchronization, train scheduling in subway systems, instantaneous power peak reduction, 312–323
Discrete choice models, demand forecasting and, overspecification of multinomial and nested logit models due to alternative specific constants and, 363–371
Distribution systems, fully loaded direct shipping strategy, warehouse/retailer systems without central inventories, 193–195

E

Endogenous segmentation, mode choice model, application to intercity travel, 34–48
Equilibrium assignment, multi-mode multi-user traffic, elastic demand in, fixed-point approach to, 107–128

F

Facility location, reliable route planning and, hazardous material transportation and, 216–226
Federal Aviation Administration, ground delay program, airline schedule perturbation and, 298–311
Fixed-point formulation, multi-mode multi-user traffic equilibrium assignment, elastic demand in, 107–128
Fleet assignment, airlines, advances in optimization of, 159–169
Fleet sizing, New York City refuse marine transport system, modeling increased system complexity, 272–293

G

Ground delay program, airline schedule perturbation and, 298–311

H

Handicapped persons, transport requests, heuristic algorithms for, 60–71
Hazardous materials
  routing
    independent Bernoulli trials sequence, objectives derived from, 252–261
    low probability-high consequence considerations in, 237–251
    New York City Department of Sanitation, refuse marine transport system, modeling increase complexity, 272–293
    non-order-preserving path selection applications to, 262–271
  routing models, insurance costs in, 227–236
  transportation
    facility location and reliable route planning, 216–226
    integrated routing and scheduling in, 200–215
Heuristics, tabu search
  vehicle routing problem with backhauls and time windows, 49–59
  vehicle routing problem with soft time windows and, 170–186
Highways
  automated systems, vehicle/gap distribution, analytical models, 18–33
  hazardous materials routing, low probability-high consequence considerations and, 237–251

I

In Memoriam
  Robert Herman, 101–103
  William S. Vickrey 1914–1996, 1–2
Insurance, costs, hazardous materials routing models and, 227–236
Intercity travel, endogenous segmentation mode choice and, 34–48
Inventory, central, fully loaded direct shipping strategy in warehouse/retailer systems without, 193–195

L

Logit models
  multinomial, endogenous segmentation mode choice model and, application to intercity travel, 34–48
  multinomial and nested, overspecification due to alternative specific constants, 363–371
Low probability-high consequence considerations, hazardous materials routing and, 237–251

M

Marine transport system, New York City refuse, modeling increased system complexity, 272–293

N

Networks
established transportation flows, one-way and two-way routes, optimum configuration selection, 386–394
fixed demand traffic problem, equilibria computation, route travel choice adjustment process as projected dynamical system, 147–158
general transport, decomposition of path choice entropy in, 349–362
stochastic and time-dependent, transit service and passenger path choice, 129–146
time-space, temporary airport closures and airline scheduling, 72–82
transportation, multi-mode multi-user equilibrium traffic assignment, elastic demand in, fixed-point approach to, 107–128
Non-order-preserving value function, path selection, applications to hazardous materials routing, 262–271

O

Operations planning, New York City refuse marine transport system, modeling increased system complexity, 272–293
Optimization, hazardous materials shipments, as sequence of independent Bernoulli trials, objectives derived from, 252–261

P

Paths
choice entropy, decomposition of, general transport networks and, 349–362
nonadditive costs, traffic equilibrium problem and, 337–348
non-order-preserving, selection, applications to hazardous materials routing, 262–271
passenger choice, transit service and, models in stochastic and time-dependent networks, 129–146
Phases, at intersection, controlled optimization, real-time traffic control, 5–17
Pickup and delivery problem, time windows in, handicapped persons transport requests and, heuristic algorithms for, 60–71
Power peaks, instantaneous reduction, train scheduling desynchronization in subway systems and, 312–323
Programming, mixed-integer, advances in optimization of airline fleet assignment, 159–169

Q

Queueing models, M/G/C/C state dependent, vehicular traffic flow models and, 324–336

R

Refuse, New York City marine transport system, modeling increased system complexity, 272–293
Roadway systems, vehicular traffic flow models, M/G/C/C state dependent queueing models in, 324–336
Routing
arc and node problems, clustered rural postman problem, generalized traveling salesman problem approach to, 187–192
choice adjustment process, as projected dynamical system, equilibria computation for fixed demand traffic problem, 147–158
hazardous materials
independent Bernoulli trials sequence, objectives derived from, 252–261
insurance costs in, 227–236
low probability-high consequence considerations and, 237–251
New York City Department of Sanitation, refuse marine transport system, modeling increased system complexity, 272–293
non-order-preserving path selection applications to, 262–271
integrated scheduling and, hazardous materials transportation and, 200–215
one-way and two-way routes transportation flows, optimum configuration selection, 386–394
reliable planning, facility location and, hazardous material transportation and, 216–226
shuttle model for route segments, transit service and passenger path choice in stochastic and time-dependent networks, 129–146

S

Scheduling
airline, temporary closure of airports and, 72–82
airline fleet assignment, advances in optimization of, 159–169
handicapped persons transport requests, heuristic algorithms for, 60–71
integrated routing and, hazardous materials transportation and, 200–215
perturbation, airlines, ground delay program and, 298–311
trains, desynchronization in subway systems, instantaneous power peak reduction, 312–323
Shipping strategy, fully loaded direct, warehouse/retailer systems without central inventories, 193–195
Stochastic transportation user equilibrium assignment, general transport networks, decomposition of path choice entropy in, 349–362
Streets, one-way and two-way routes transportation flows, optimum configuration selection, 386–394
Subway systems, train scheduling desynchronization in, instantaneous power peak reduction, 312–323

T

Tabu search, heuristic
vehicle routing problem with backhauls and time windows, 49–59
vehicle routing problem with soft time windows and, 170–186
Time windows
backhauls and, vehicle routing problem with, tabu search heuristic for, 49–59
pickup and delivery problem, handicapped persons transport requests and, heuristic algorithms for, 60–71
soft, vehicle routing problem with, tabu search heuristic for, 170–186
Traffic
fixed demand problem, equilibria computation, route travel choice adjustment process as projected dynamical system, 147–158
multi-mode multi-user equilibrium assignment, elastic demand in, fixed-point approach to, 107–128
real-time control, controlled optimization of phases at intersection, 5–17
vehicular flow models, M/G/C/C state dependent queueing models in, 324–336
Traffic equilibrium problem, nonadditive path costs, 337–348

Trains, scheduling desynchronization in subway systems, instantaneous power peak reduction, 312–323
Transit service, passenger path choice and, models in stochastic and time-dependent networks, 129–146
Transportation flow, one-way and two-way routes, optimum configuration selection, 386–394
Travel choice, route adjustment process, as projected dynamical system, equilibria computation for fixed demand traffic problem, 147–158
Traveling salesman problem, clustered rural postman problem and, 187–192
Travel mode, intercity travel, endogenous segmentation model, 34–48
TSS dissertation abstracts, 83–94

V

Vehicle/gap distribution, automated highway systems, analytical models, 18–33
Vehicle routing problem
  backhauls and time windows in, tabu search heuristic for, 49–59
  backhauls in, an exact algorithm for, 372–385
  soft time windows in, tabu search heuristic for, 170–186

Vehicular traffic flow models, M/G/C/C state dependent queueing models in, 324–336

W

Warehouse/retailer systems, without central inventories, fully loaded direct shipping strategy in, 193–195
